

BME VIIIAV18

Smart megoldások az Internet világában

Statisztikai alapok & smart környezet és sport

Bevezetés - ICT based smart services in long-distance running competitions

Dávid Berke & Kálmán Kovács

Contents

I. Concept of runner tracking & monitoring

- ICT & IMS based system

II. Tools from runner positioning

- Distance-Time-Map (DTM)
- DTM based runner tracking

III. Statistical analyzes

- Refreshment transmission
- Runner classification

Automatic Runner Monitoring System

Environment - Monitoring Systems

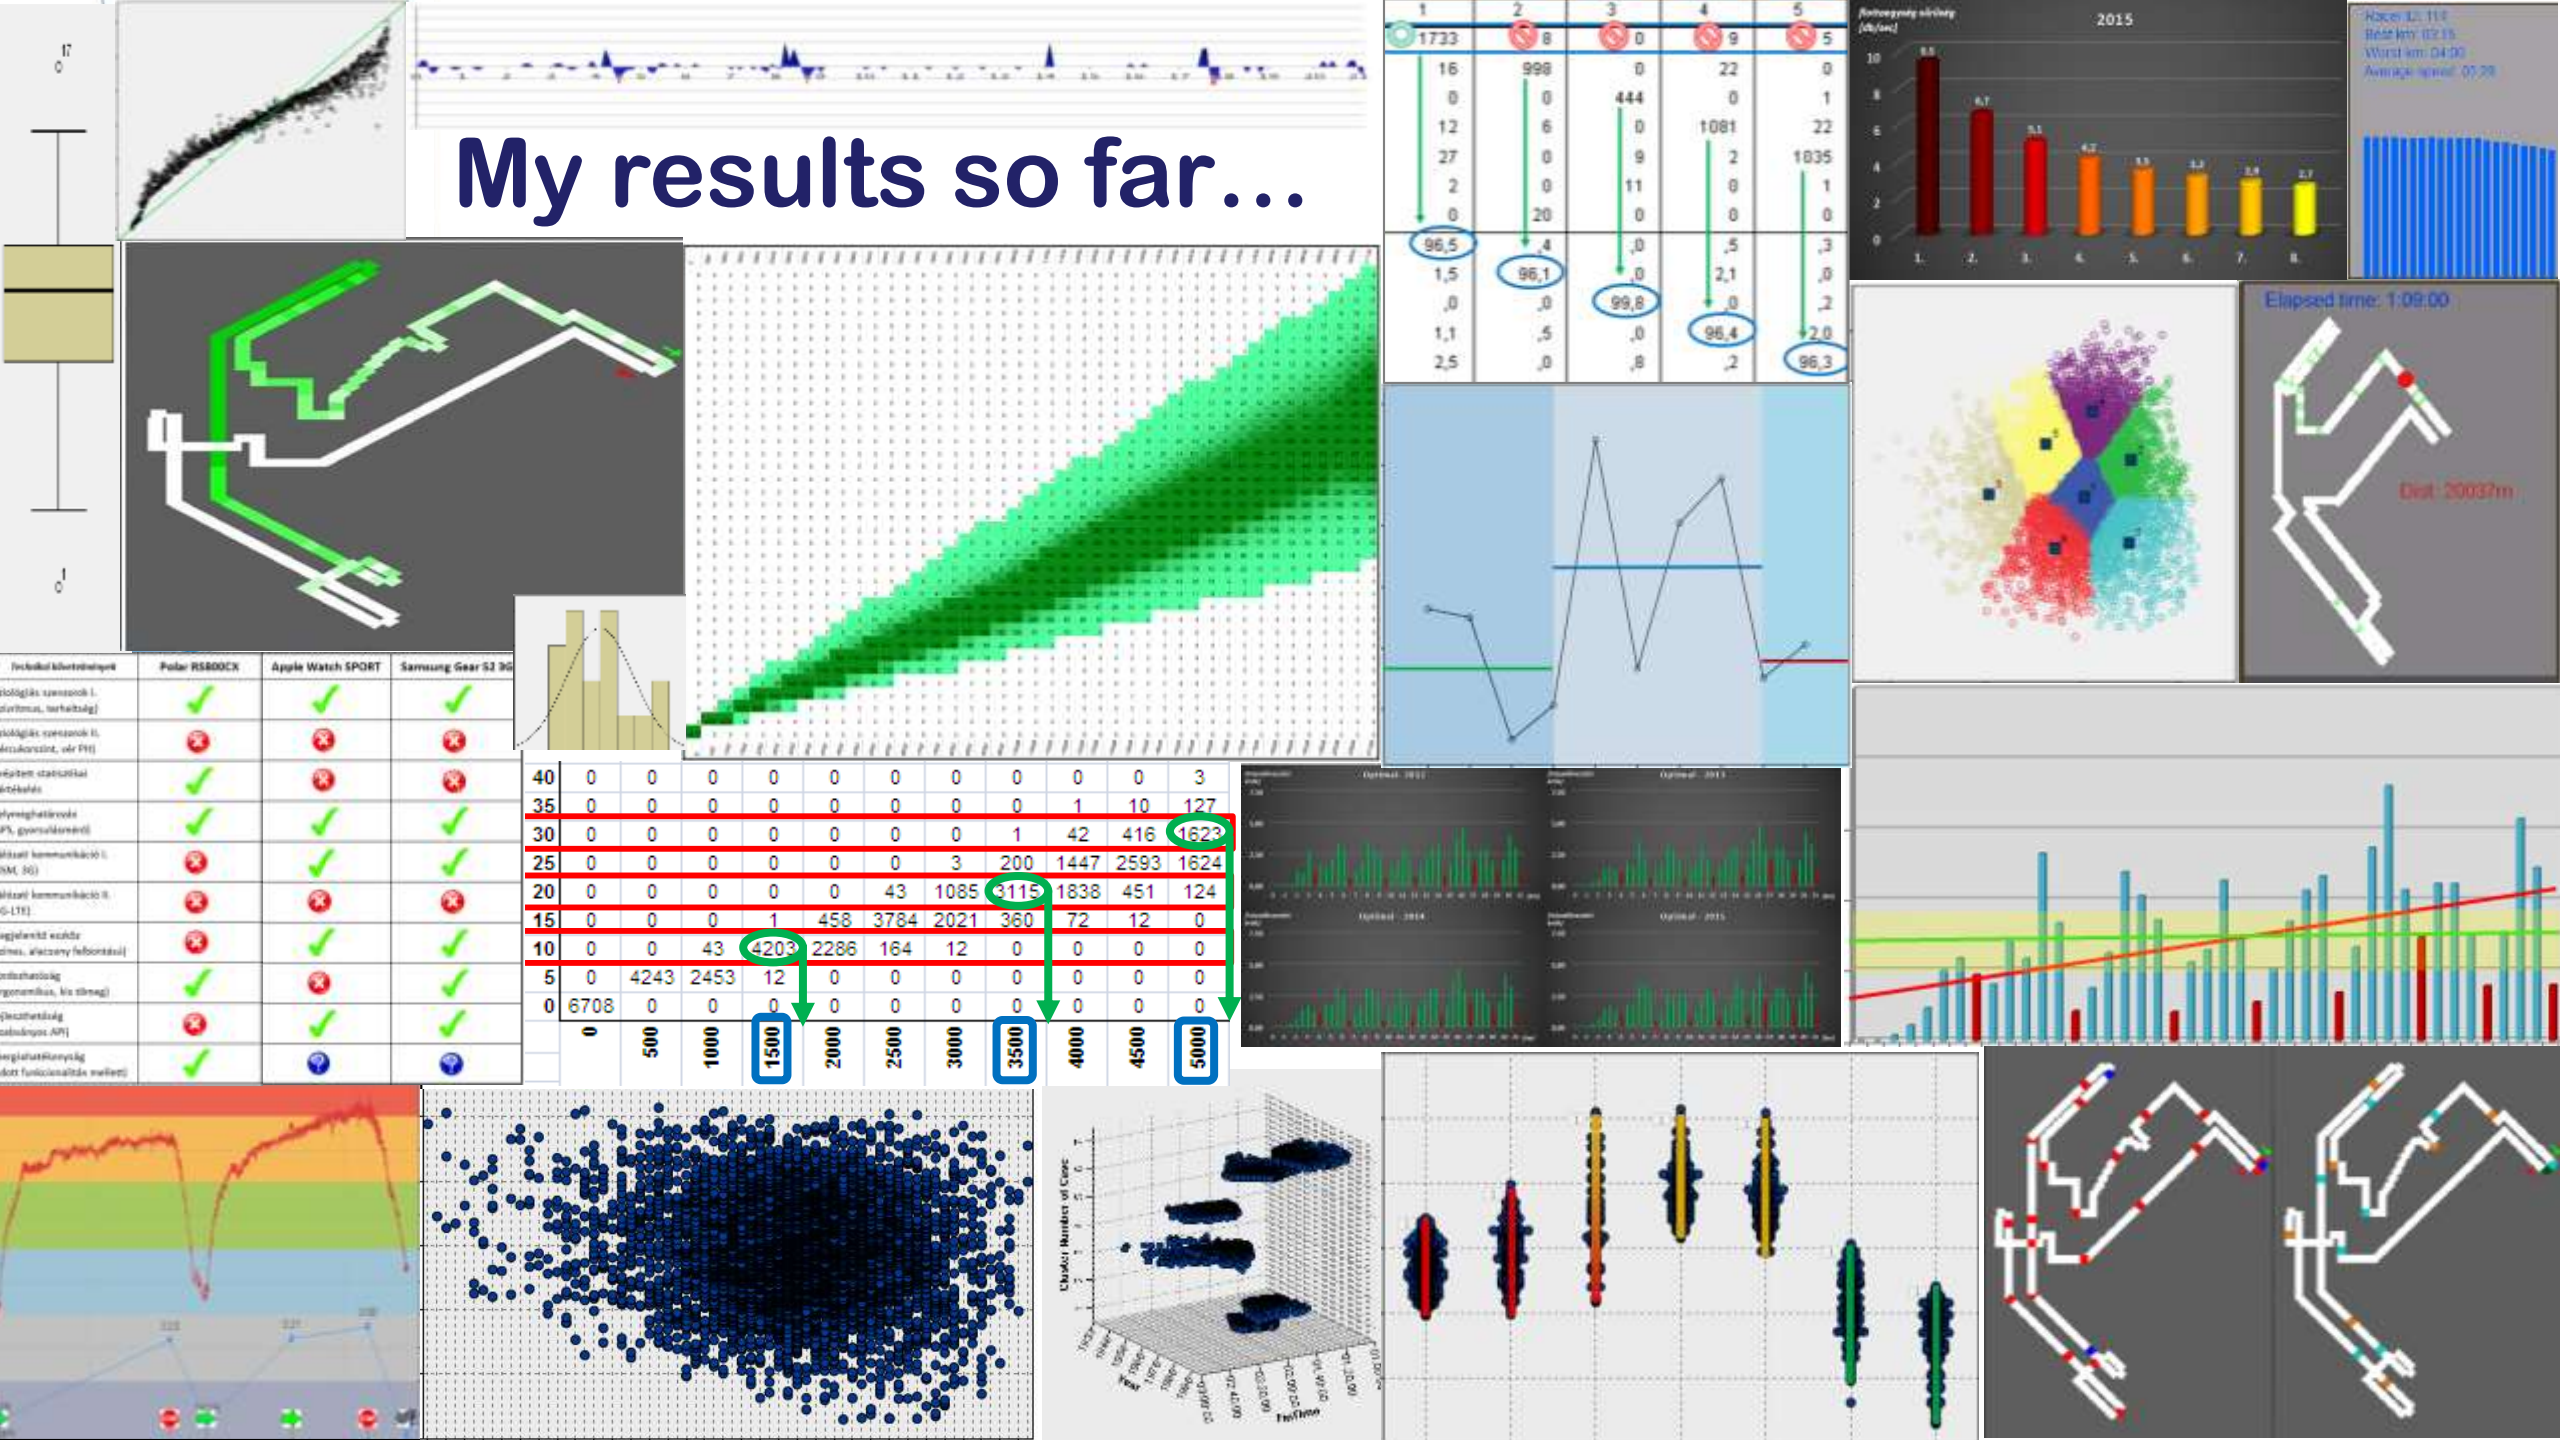

Meteorological Satellites

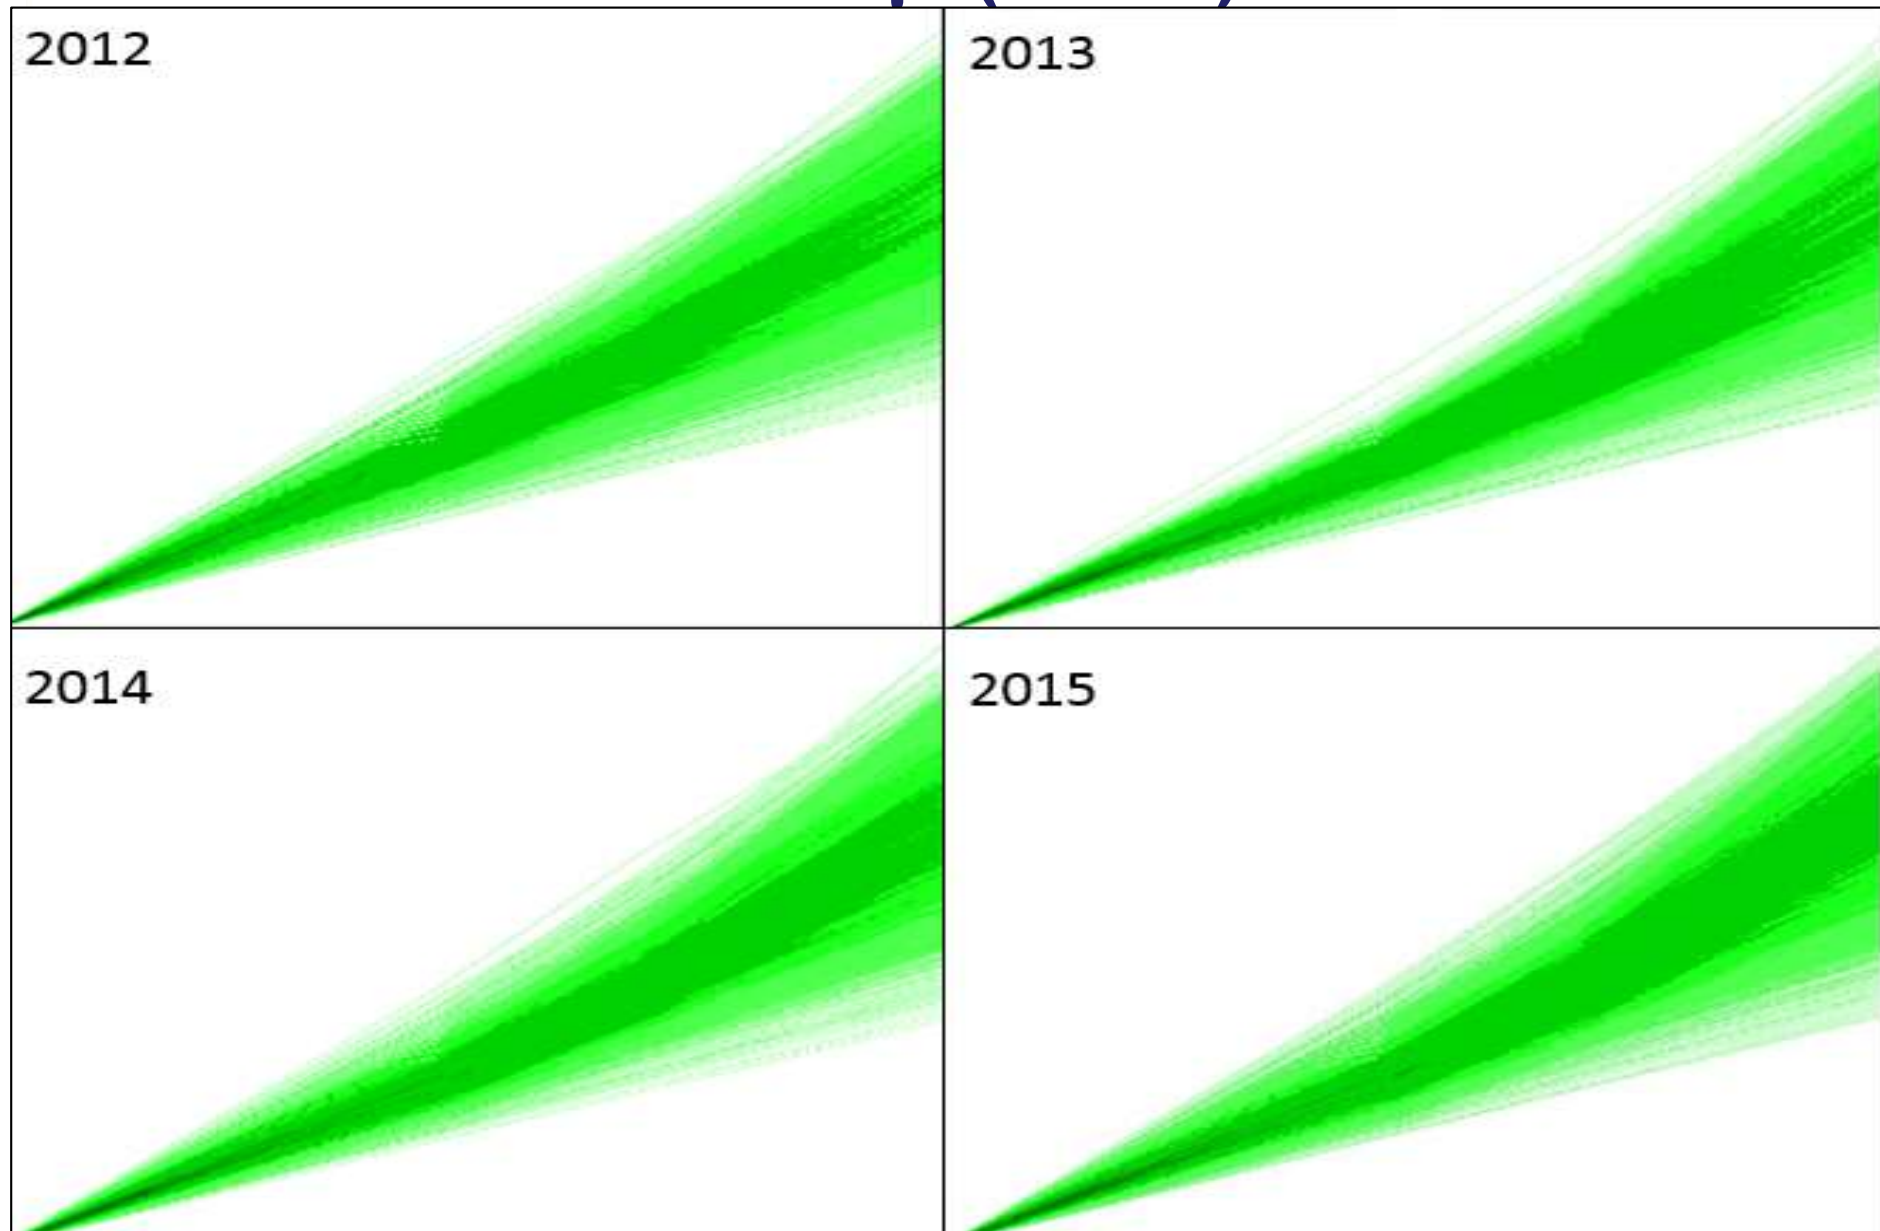

Temperature – Clouds – Humidity - Wind

My results so far...

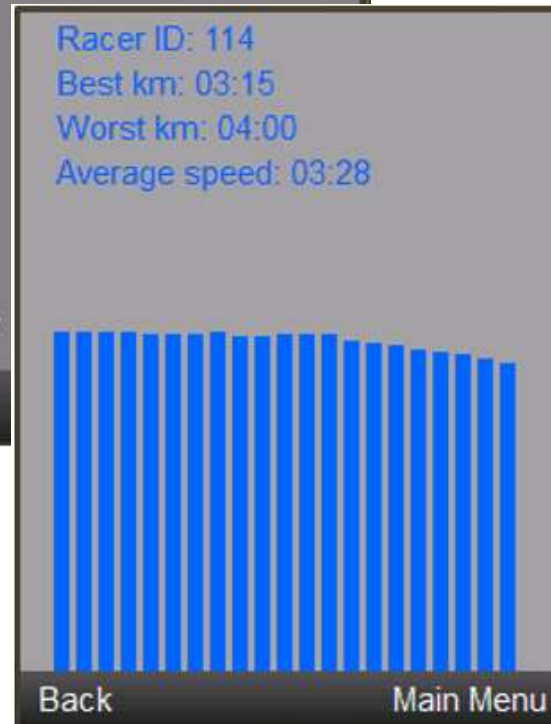

Distance-Time-Map (DTM)

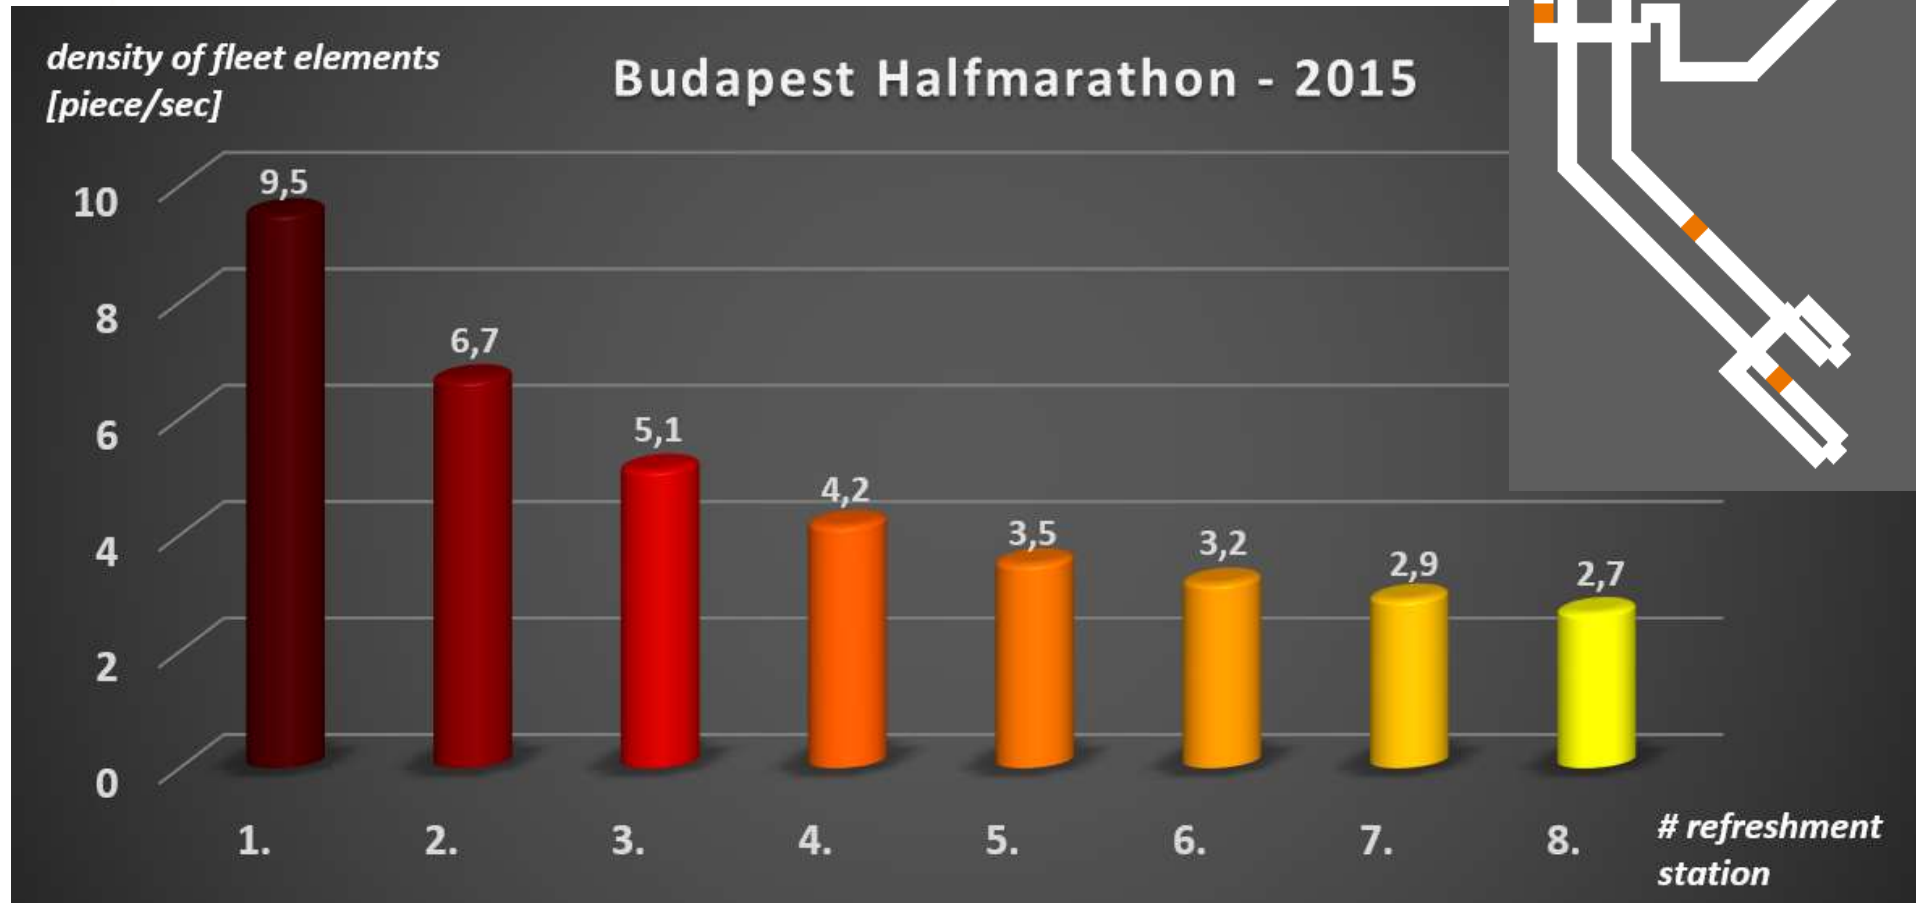

DTM simulation

DTM based runner tracking

How to manage refreshment transmission?

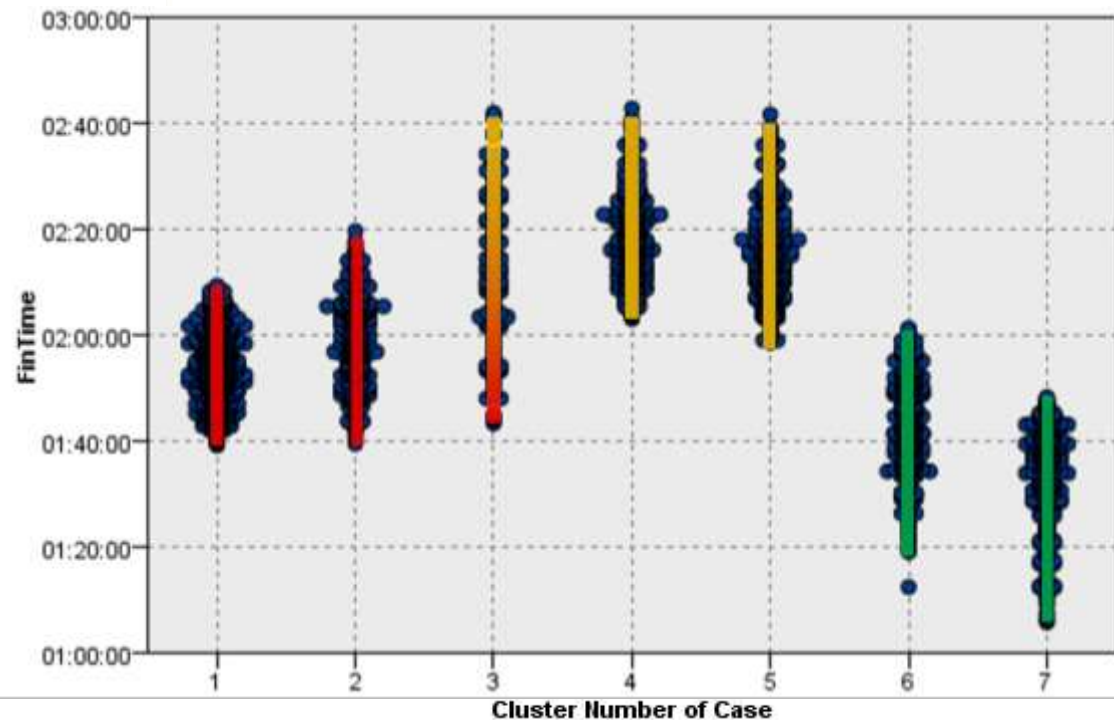

How to manage all the runners?

- Together?
- One-by-one?
- How else?

Runner classification by clustering

- Based on running performance
 - Speed (FinTime), Age (Year)

Cluster interpretation vs. practice

Speed / Age	Elder	Middle-aged	Young
Slower			
Medium			
Fast			

Thank you for your attention!
